

09/16: Intro to AI Agents + Project Brainstorming

Group 1

Contact Information

Name	Major/Year	Email	Phone
Filippo Montanari	EE/Freshman	fm2030@bu.edu	617-413-4756
Tighe Billings	CS/Junior	tigheb@bu.edu	973-524-1199
Artem Litvinov	CS/Sophomore	arteml@bu.edu	857-264-9089
Hiranya Bansal	CE/ Sophomore	hiranya@bu.edu	+1 6172178656

Repository

You need to keep your code centralized! Create a github repository and add everyone in your group as a contributor. Paste the link to this repository below.

<https://github.com/Hiranya-17/-GROUP-2-CSC.git>

Type of Project

Your team is allowed to work on any type of project, so long as it is feasible to complete within the semester (or shortly thereafter). Whether you're creating a full-stack web app, mobile app or anything in between, please state our choice below.

Web App

Communication

A vast majority of your collaboration will be outside of our general meetings. It is essential that everyone in the group is able to communicate virtually. Please decide on a mode of communication.

Messages

Tech Stack

Everyone's proficiency level is different, some of us love Java, others hate it. Discuss with the group which technologies you'd like to use in the project and list them below (languages, frameworks, etc).

React, JavaScript, Python, SQL

Brainstorming

What the team may want to work on is a group decision. Everyone should come up with and jot down a few ideas in the box below. After further consideration, decide which project idea your team wants to move forward with for the semester.

Bullrun: Investment Game

- Choose world region
- Find investors in your region (results based on your past record and types of investments)
 - Each region's investors have different demands
- Choose investments based on risk and investor demands
- Event cards change the odds of success (natural disaster, foreign trade agreements, market shifts, etc.)
- Tracked Values: AUM (money), LP Trust (investor confidence)

Audito: Crowdsourced music critics

- Connect to your music streaming platform
- Show recently listened to songs and playlists
- Rate songs or albums and write reviews
- Follow friends and influencers for their opinions

Final Project Idea

When you're done, commit this form as a pdf in your github repository to "submit".

This should be completed before our next meeting on **September 23rd**.

Audito: Crowdsourced music critics

Roles

Consider your strengths, weaknesses, and level of experience and determine roles for your team. We understand that not every project is the same but everyone is required to have **two** roles: **product** and **operation**.

Product roles are technical and most similar to those in a large tech company: Frontend Engineer, Backend Engineer, UI/UX Designer, Project Manager, etc.

Operational roles help maintain team productivity, organization, and communication. For example, maintaining documentation (README, google docs, etc.), communicating your progress to the e-board, etc.

<i>Product Role</i>	<i>Operation Role</i>	<i>Name</i>
Project Manager, UI Designer	Communication, organization	Filippo Montanari
Full Stack	Coding	Tighe Billings
Backend	Coding	Hiranya Bansal
Project Operations	Maintain team productivity and documentation	Artem Litvinov

***Note:** Do not wait to start! You're free to begin working as soon as this form is complete.
